

Series 100BE **Aluminum Louver Doors**
IMPACT TEST
 Hurricane Rated and Florida Approved!

Cline Doors is excited to announce the expansion of our hurricane rated door line. The flush door market has long needed an impact rated louver door. Cline has answered that challenge with a fixed louver door system. Now openings that require ventilation will no longer have to sacrifice strength. Cline has brought to the market an impact rated louver door that will stand up to the toughest environments, both chemically and physically.

Cline Doors Series 100BE Aluminum Louver Doors have passed large missile impact testing level-D. They have been approved for both Florida Building Code and Miami-Dade, achieving a design pressure of up to ± 60 psf. Standard and oversize doors were tested so most openings will be covered. Cline is extremely proud to use its 56 years of door expertise to bring this product to market!

Images from the testing lab
